

Lab session 5:

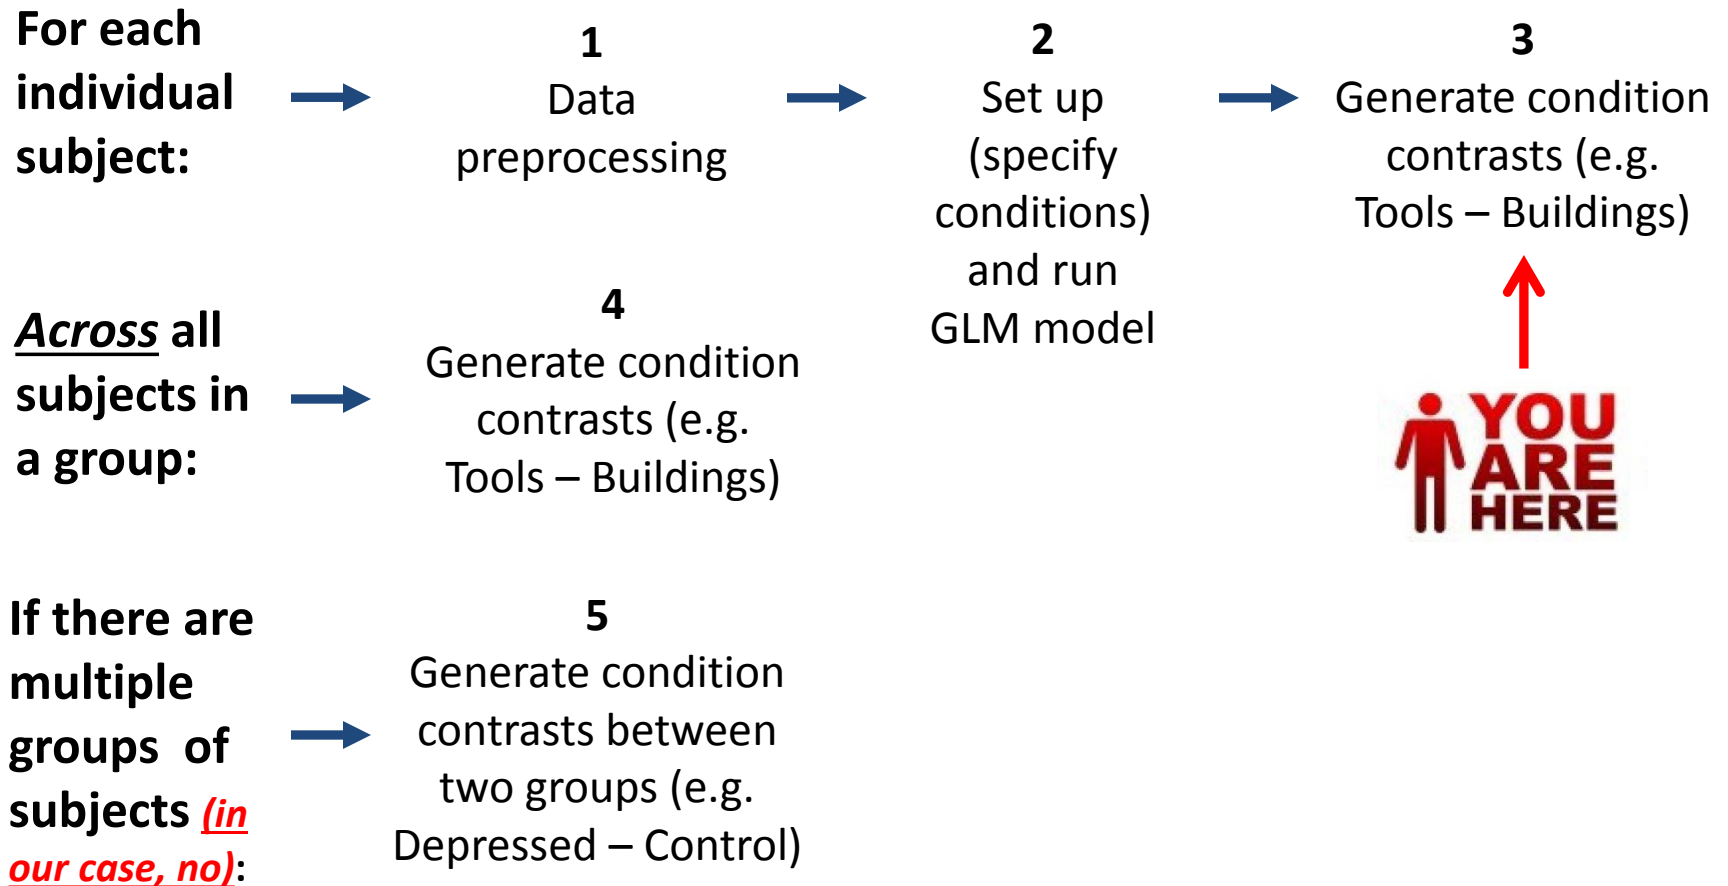

Single-subject Statistical Parametric Mapping (SPM) contrasts

Andrew Bauer

02/10/16

Session no.	Date (all Wednesday)	Topic/activity	Topic of quiz that day	Topic of lab write-up (assignment) due that day
1	13-Jan	Lab overview		
2	20-Jan	Brain anatomy		
3	27-Jan	Data preprocessing	Brain anatomy (no. 1)	
4	3-Feb	Set up GLM model	Functional brain anatomy (no. 2)	
5	10-Feb	Single-subject SPM contrasts	Data preprocessing and GLM model (no. 3)	Brain anatomy (no. 1)
6	17-Feb	Within-subject MVPA		Single-subject SPM contrasts (no. 2)
7	24-Feb	SIBR tour and review for mid-term exam		Within-subject MVPA (no. 3)
No lab	2-Mar	No lab (mid-term exam)		
No lab	9-Mar	No lab (spring break)		
8	16-Mar	Group-level SPM contrasts		
9	23-Mar	Between-subjects MVPA		Group-level SPM contrasts (no. 4)
10	30-Mar	Voxel-wise modeling		Between-subjects MVPA (no. 5)
11	6-Apr	Functional connectivity analysis (no assignment)		
12	13-Apr	Review for final exam		Voxel-wise modeling (no. 6)
No lab	20-Apr	No lab		
No lab	27-Apr	No lab (final exam)		

General sequence of data preprocessing and GLM analysis

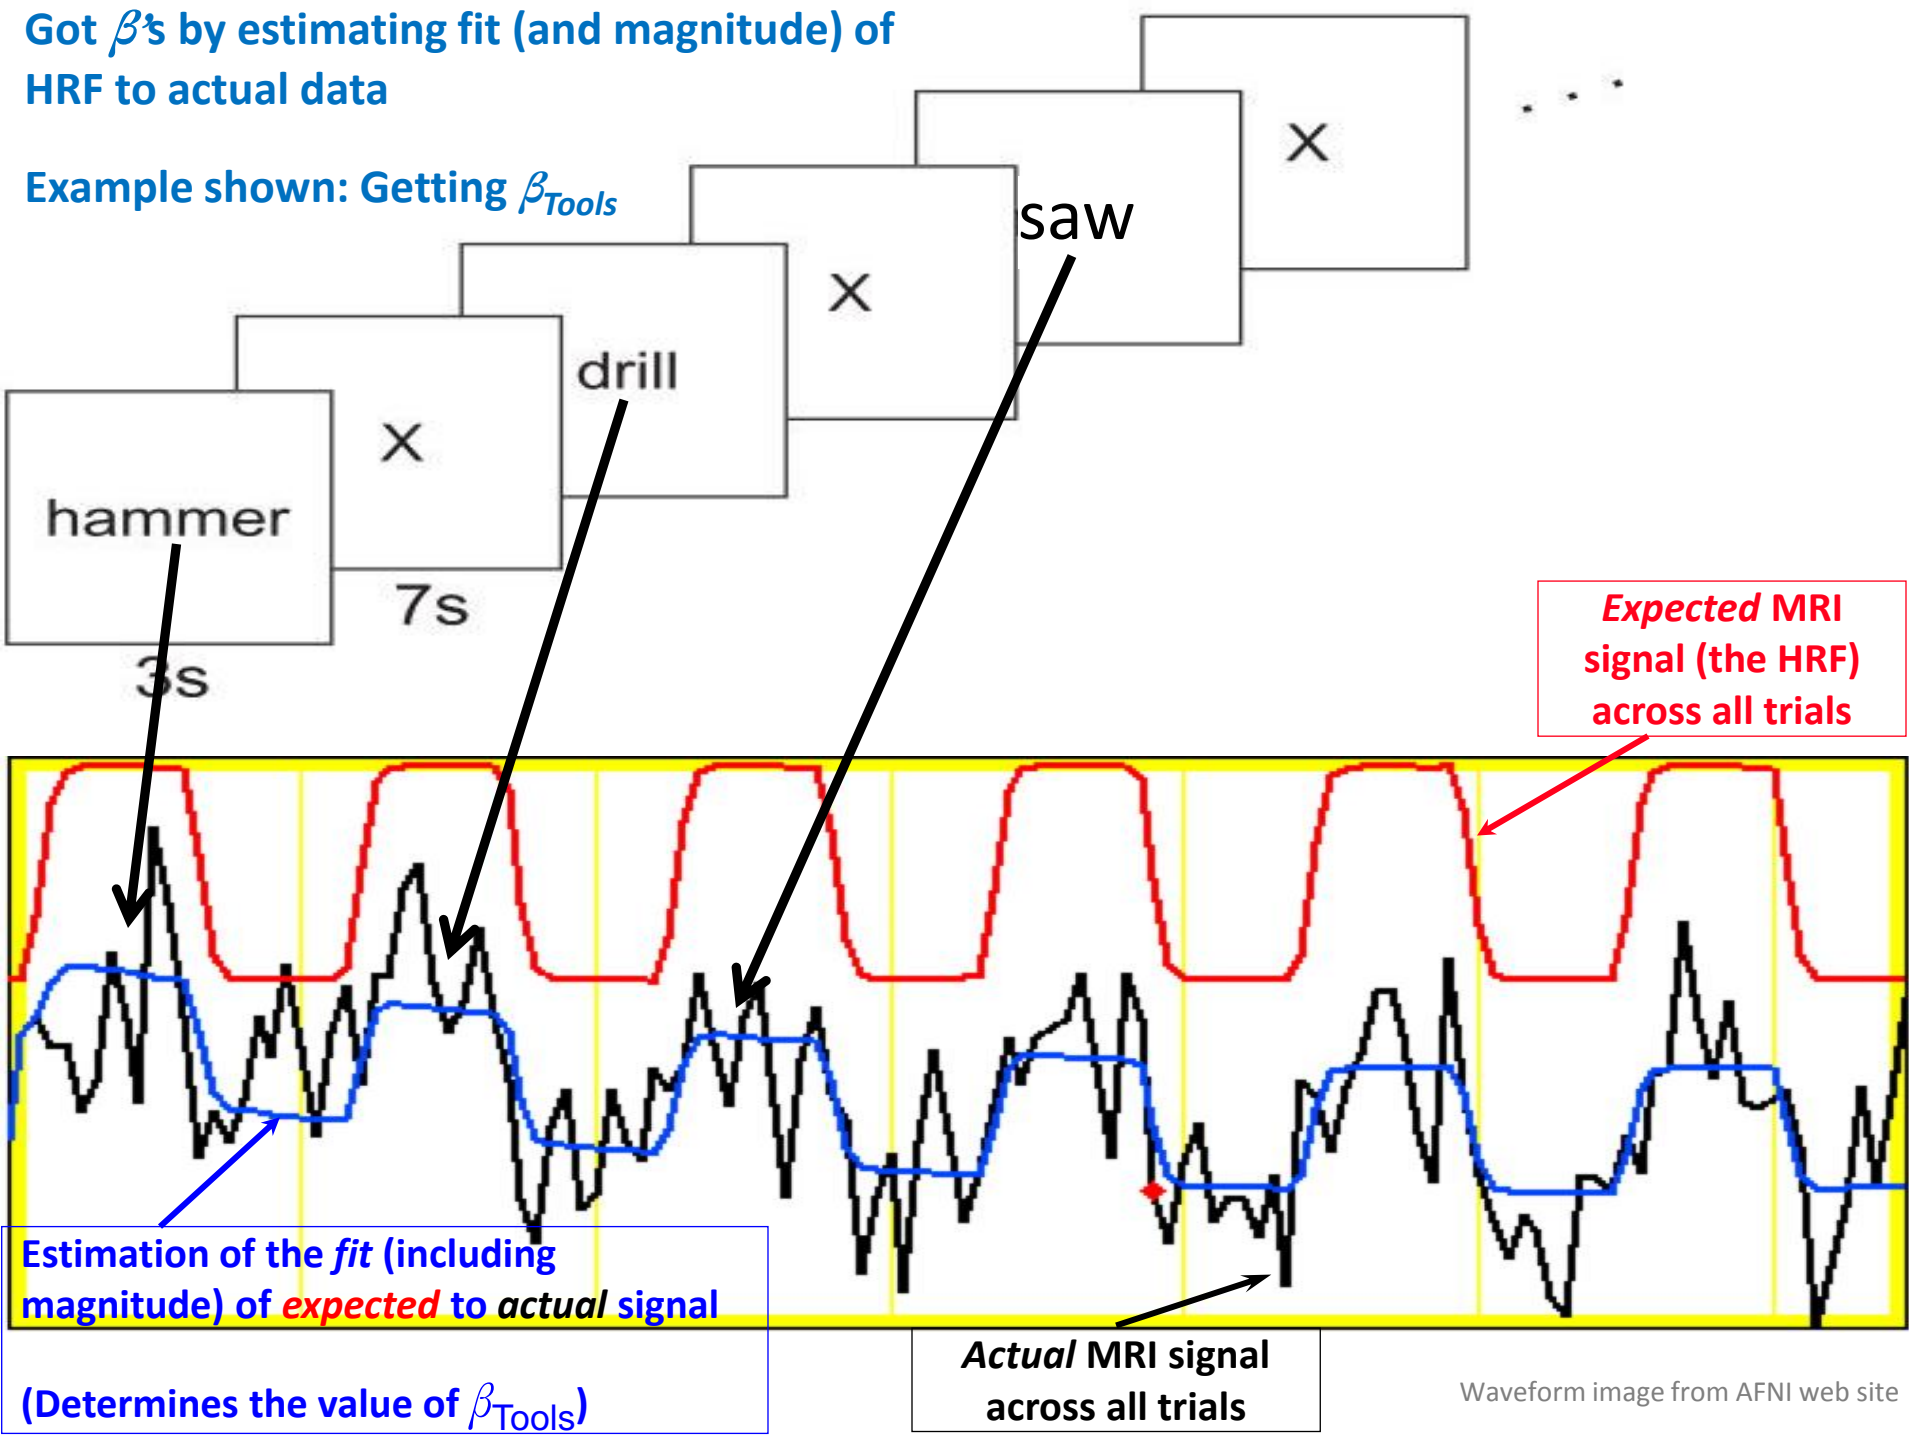

Programming statistical β contrasts to compare...

- Activation of one condition vs. Baseline (“Resting”)
- Activation between two different conditions
 - Baseline cancels out (see below)

Contrast	Baseline multiplier	Tools multiplier	Buildings multiplier	Statistical result (<i>t</i> -stat and <i>p</i> -value) in <u>each</u> voxel
$\beta_{\text{Tools}} - \beta_{\text{Baseline}}$	-1	1	0	Tools activation that is > “Resting”
$\beta_{\text{Buildings}} - \beta_{\text{Baseline}}$	-1	0	1	Buildings activation that is > “Resting”
$\beta_{\text{Tools}} - \beta_{\text{Buildings}}$ i.e. (Tools - Baseline) - (Buildings - Baseline)	0	1	-1	(Tools > “Resting”) that is > (Buildings > “Resting”)
$\beta_{\text{Buildings}} - \beta_{\text{Tools}}$ i.e. (Buildings - Baseline) - (Tools - Baseline)	0	-1	1	(Buildings > “Resting”) that is > (Tools > “Resting”)

Got β 's by estimating fit (and magnitude) of HRF to actual data

Example shown: Getting β_{Tools}

Each category vs. average of others

(For the assignment, you will need to download an Excel file called “session5 companion betaMultis” off Blackboard. You will need to save it to the computer and open it in Excel)

[illegible]

Start Matlab 2012b (on desktop, or type "matlab" in Start menu to find it)

NOTE: You MUST select Matlab 2012b, do NOT select 2014b

MATLAB 7.10.0 (R2010a)

File Edit Debug Parallel Desktop Window Help

Current Folder: C:\Users\andrewba\Documents\MATLAB

Shortcuts How to Add What's New

Command Window

New to MATLAB? Watch this [Video](#), see [Demos](#), or read [Getting Started](#).

MATLAB desktop keyboard shortcuts, such as Ctrl+S, are now customizable.
In addition, many keyboard shortcuts have changed for improved consistency across the desktop.

To customize keyboard shortcuts, use [Preferences](#). From there, you can also restore previous default settings by selecting "R2009a Windows Default Set" from the active settings drop-down list. For more information, see [Help](#).

[Click here](#) if you do not want to see this message again.

Details

Start Ready

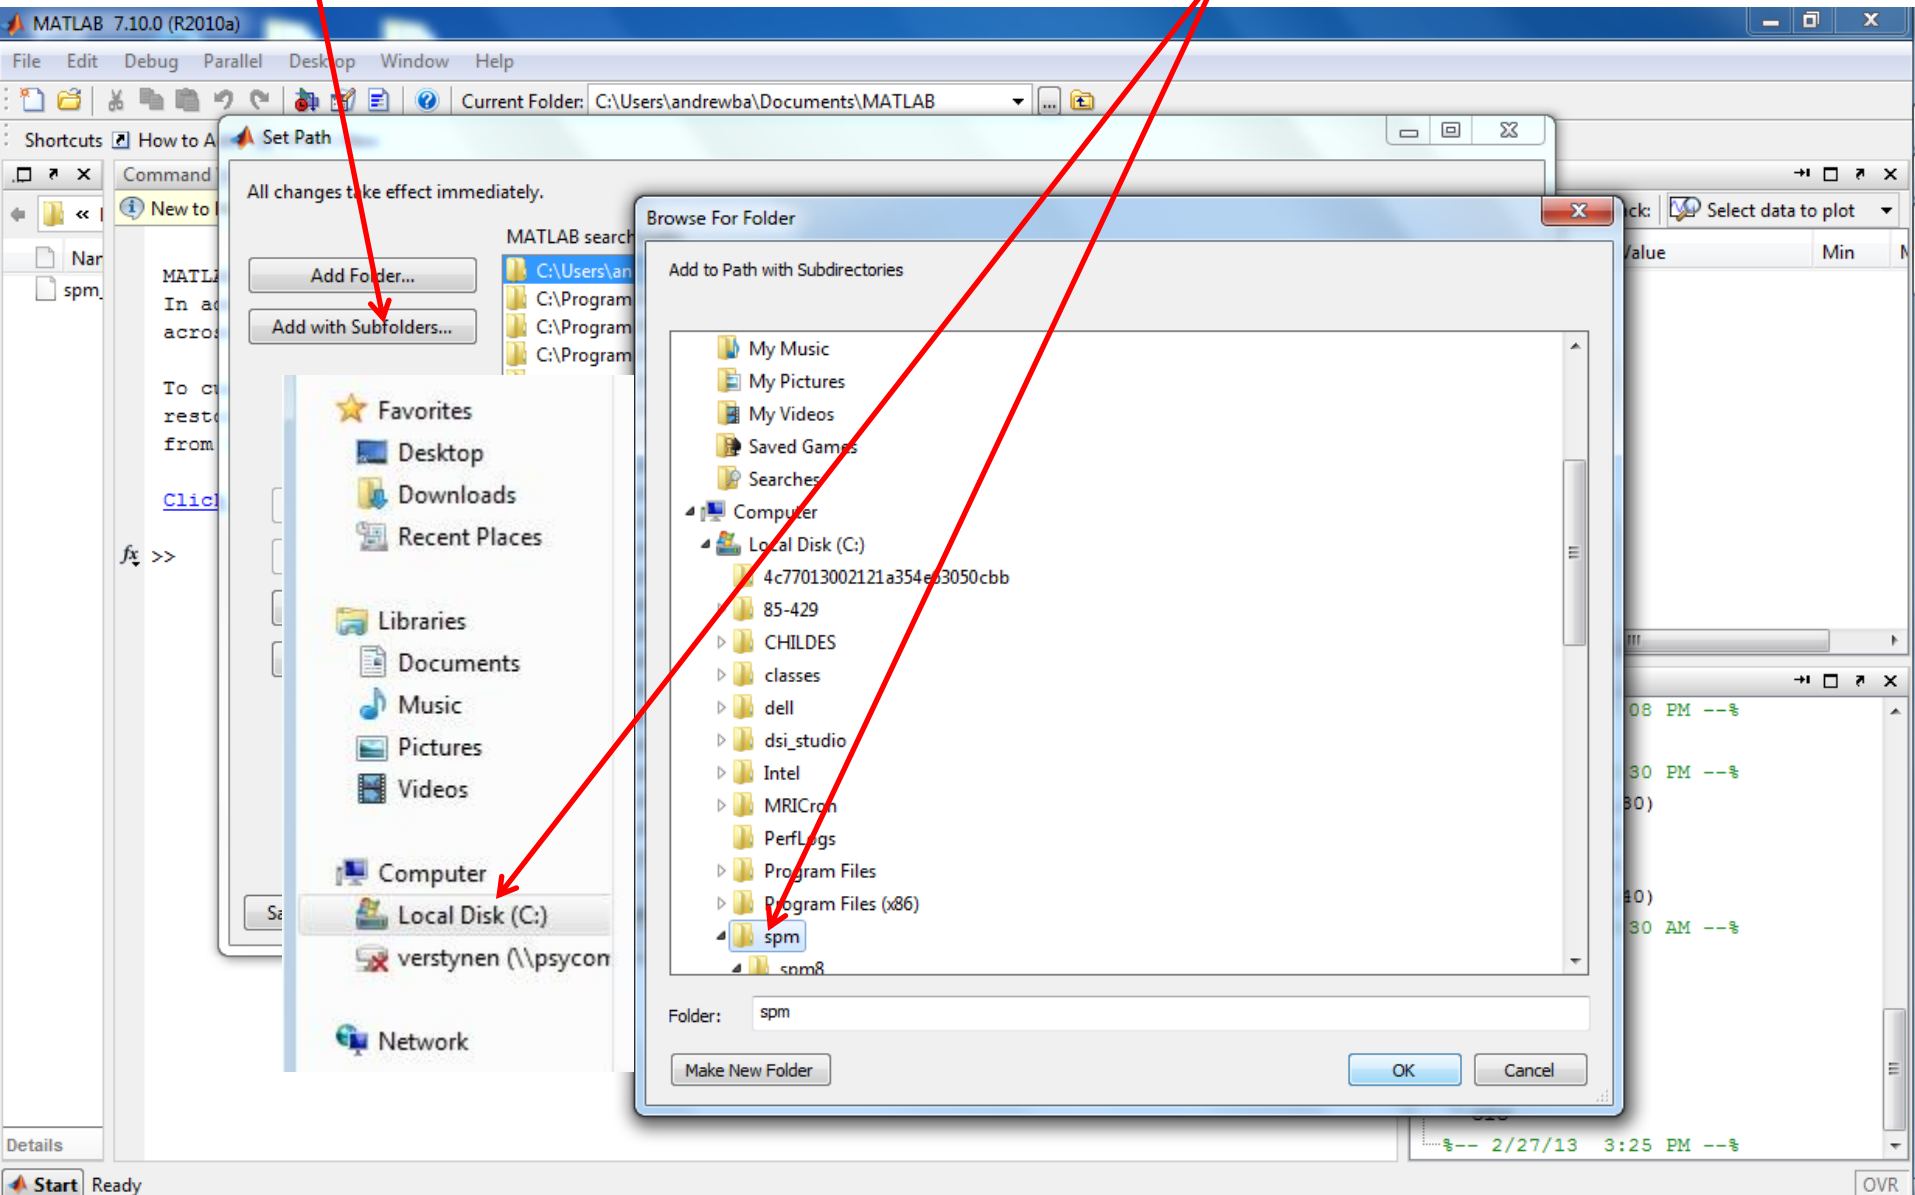

OVR

Select Set Path

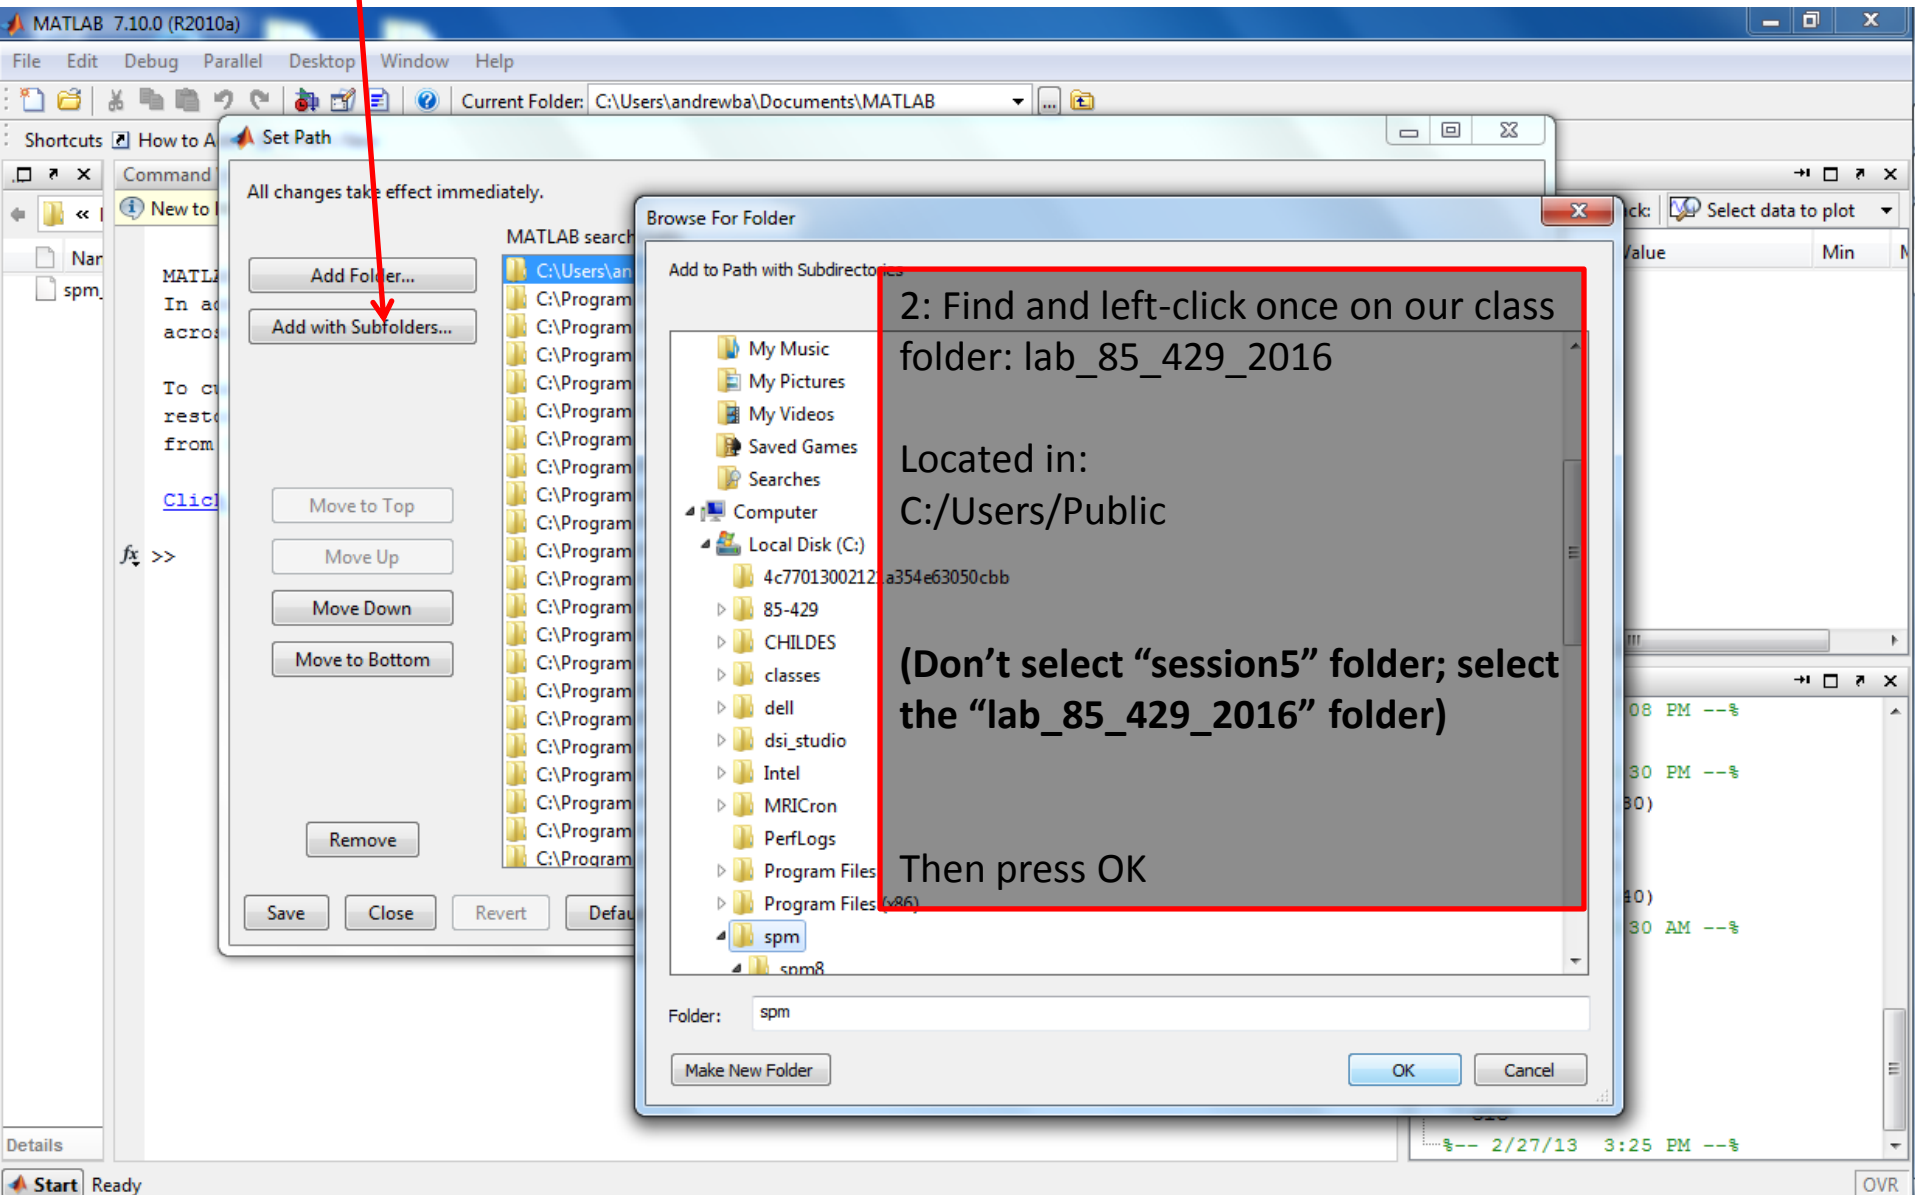

1: Select Add with Subfolders

2: SINGLE-click the folder spm or spm8 under C:, click OK

1: Select Add with Subfolders again

1: Select Close

2: Select No if it asks to save the path file somewhere else (it may not ask)

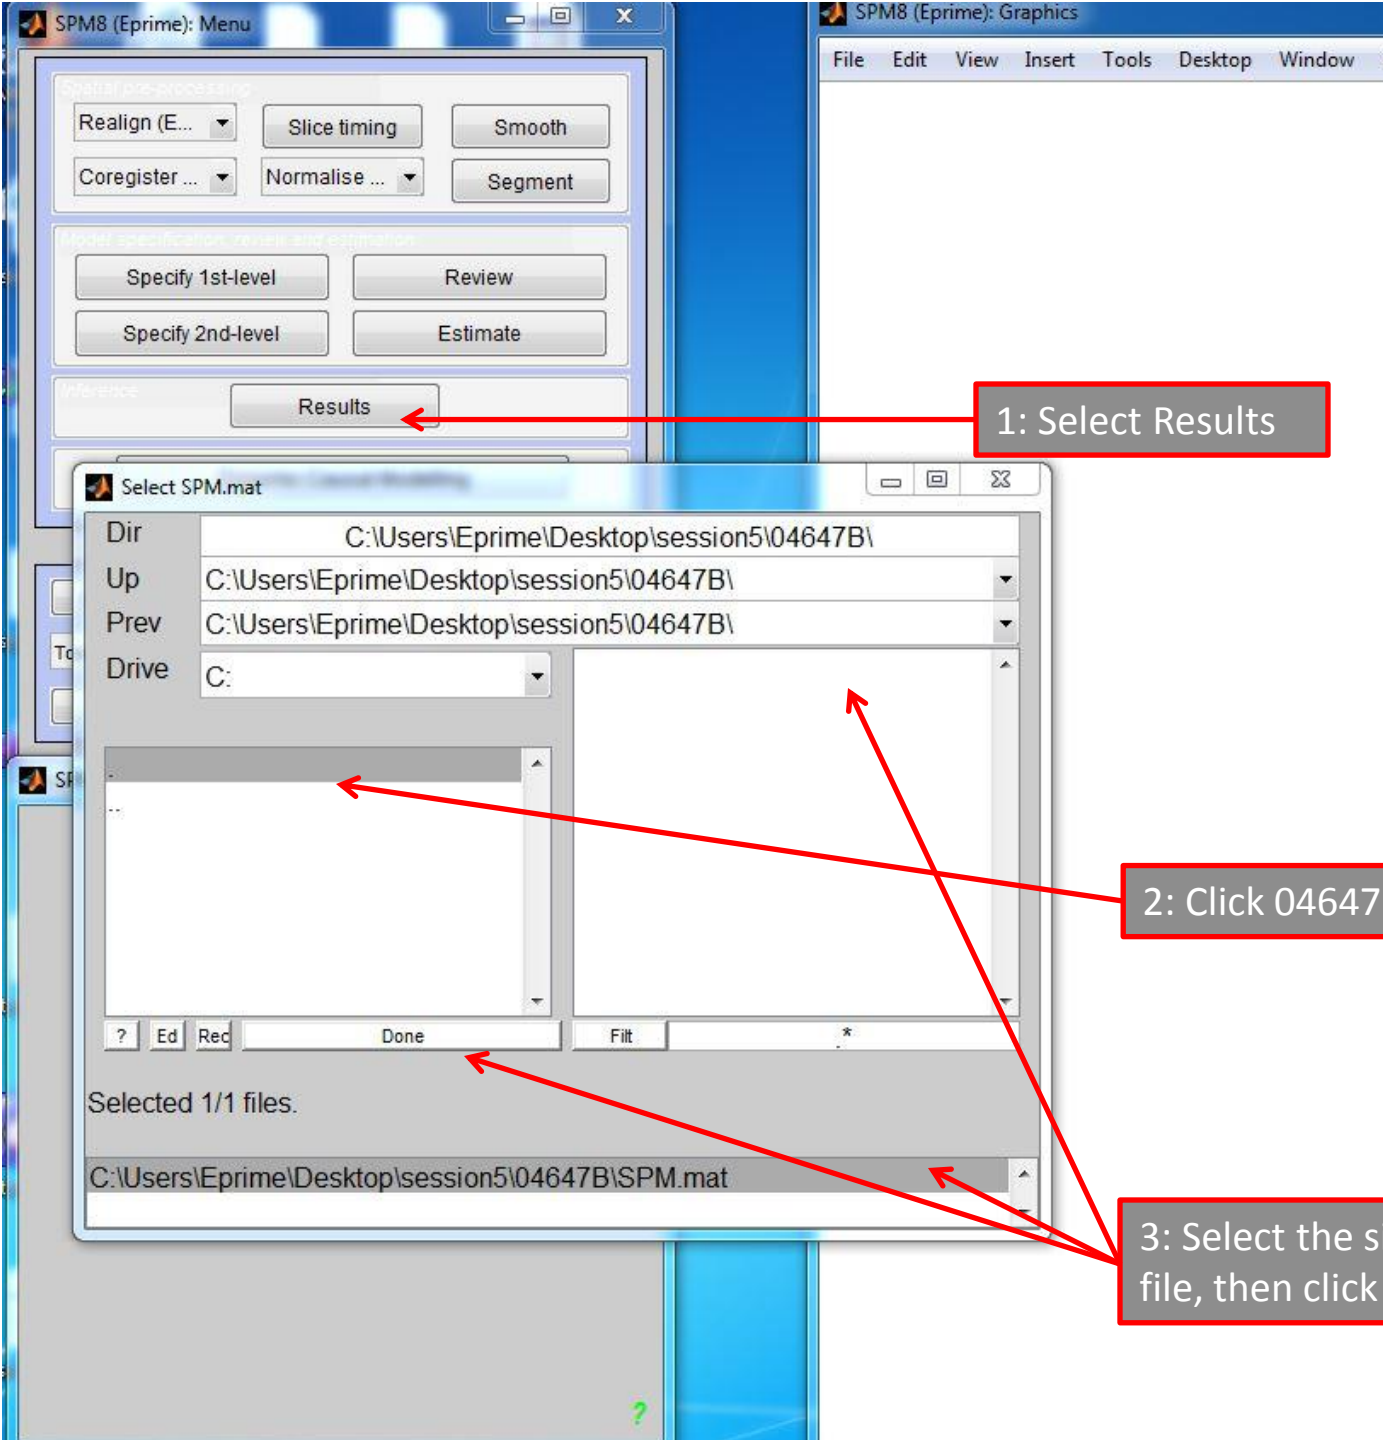

1: Go to the Matlab Command Window and type:
`cd C:/Users/Public/lab_85_429_2016/session5`

2: Then type: `spm fmri`

...(OR navigate there using the browser)

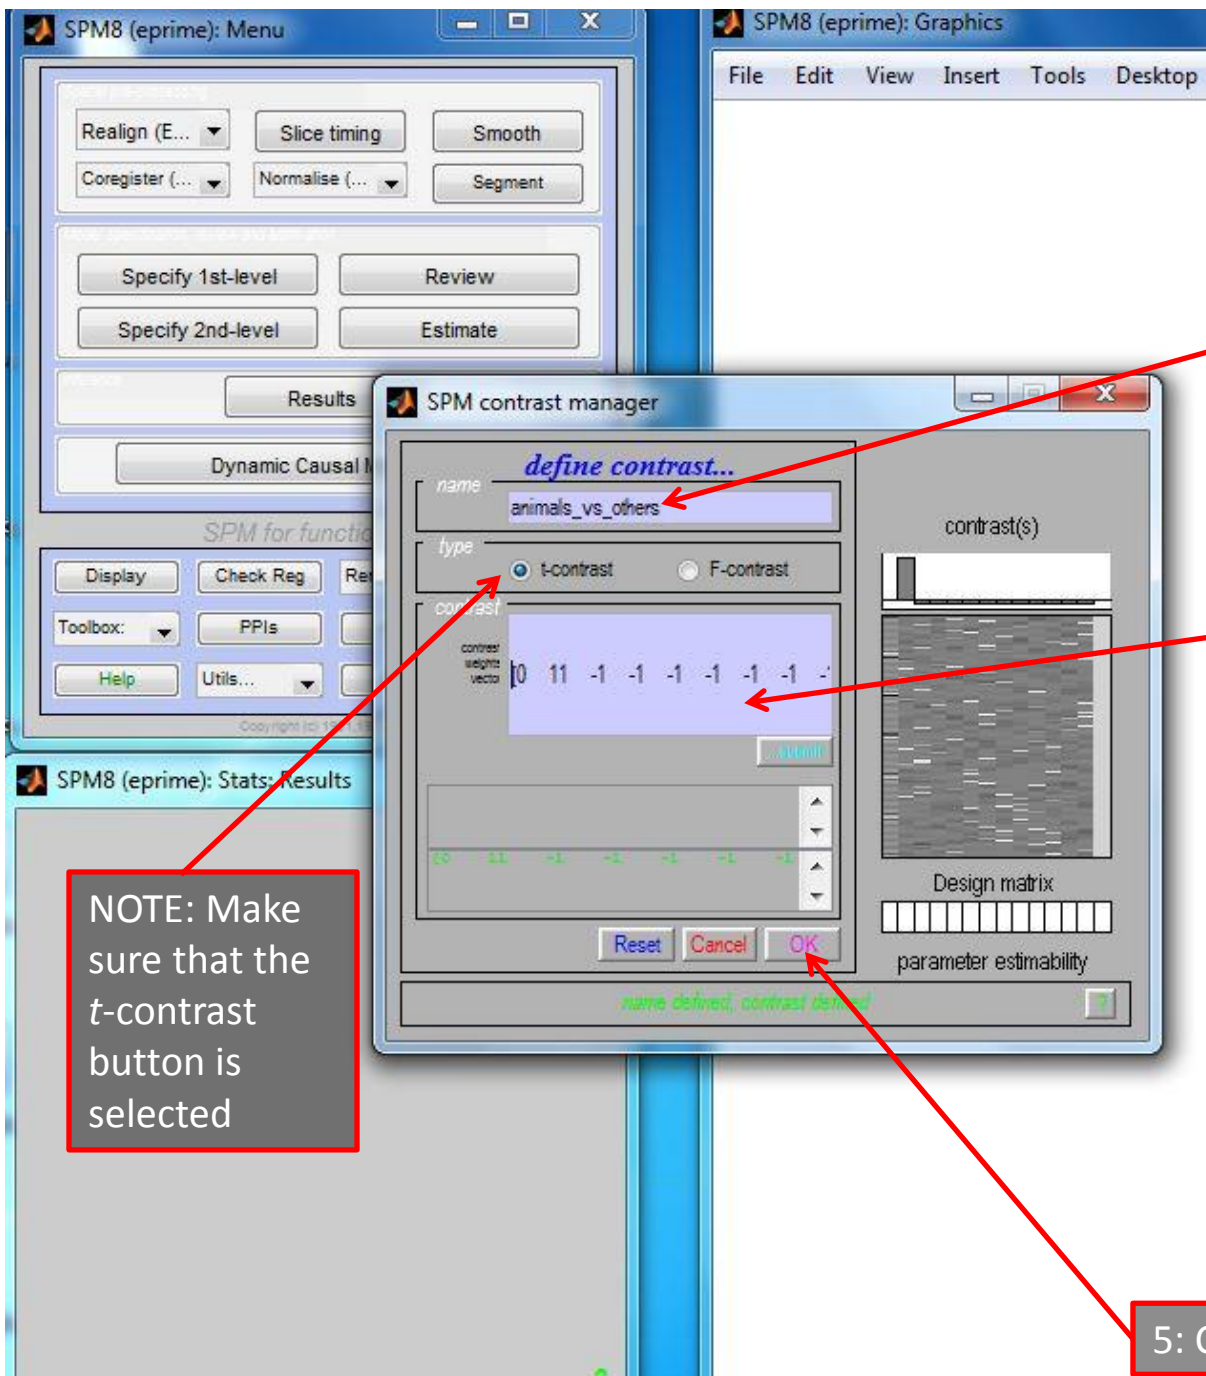

1: Select
Define new
contrast

2: Next
slide...

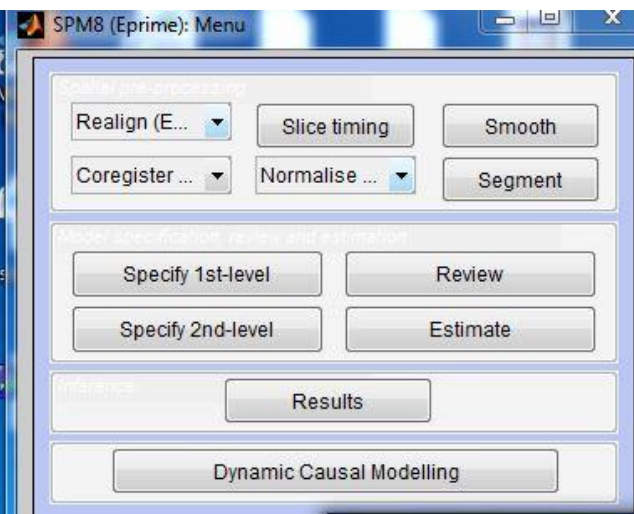

3: For Name, type:
animals_vs_others

**NOTE: For your assignment,
you will create different
contrasts and you should
name them differently**

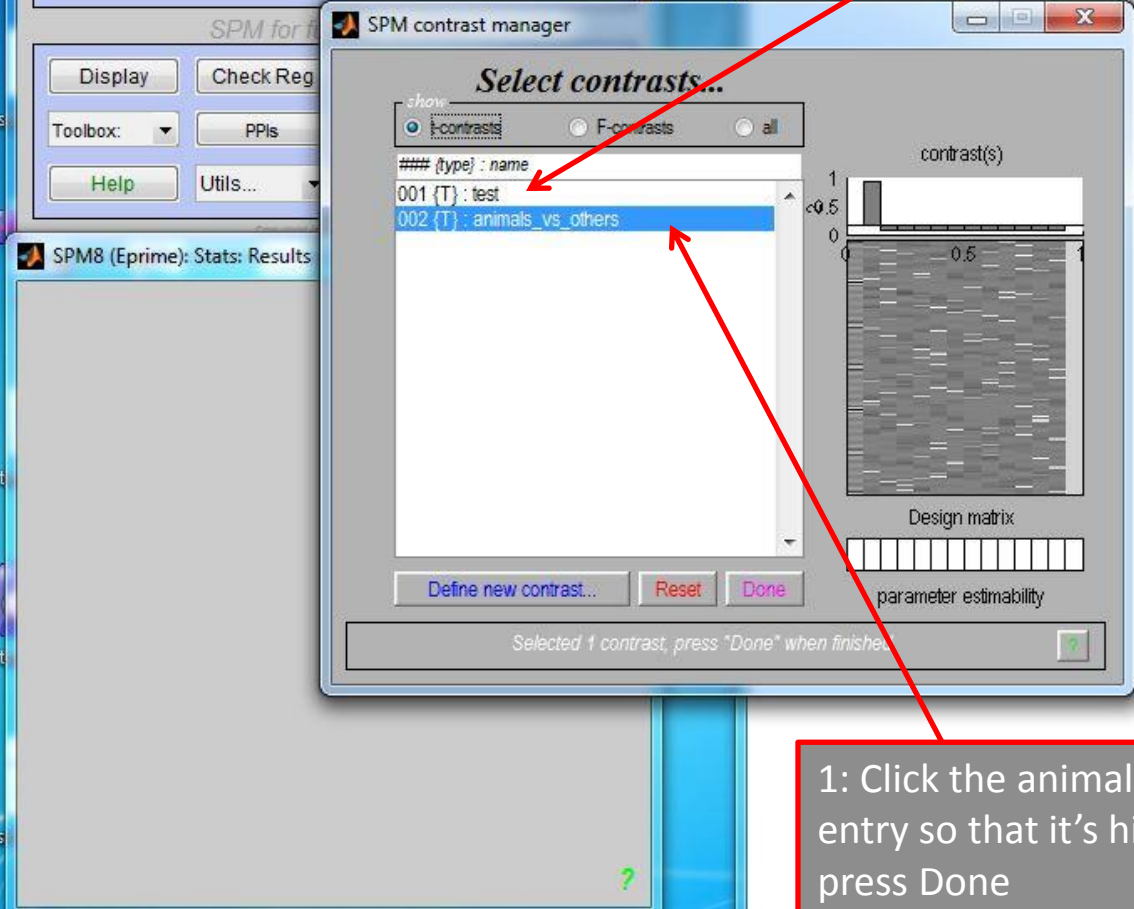

**NOTE: Make
sure that the
t-contrast
button is
selected**

4: This is where you input the
condition multipliers for a
contrast. For Animals, we give it
the multiplier "11", and for each
of the remaining categories (11
left), we put "-1". This sums to 0.
**Use the file from Blackboard
called "session5 companion
betaMultis" to copy (ctrl+c) the
vector of multipliers for
Animals, and paste (ctrl+v) it
here (include the brackets!)**

5: Click OK

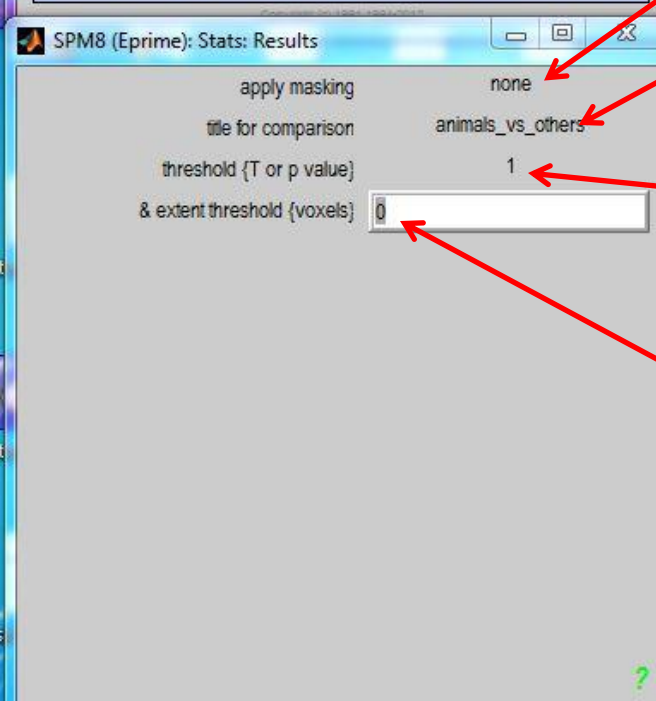

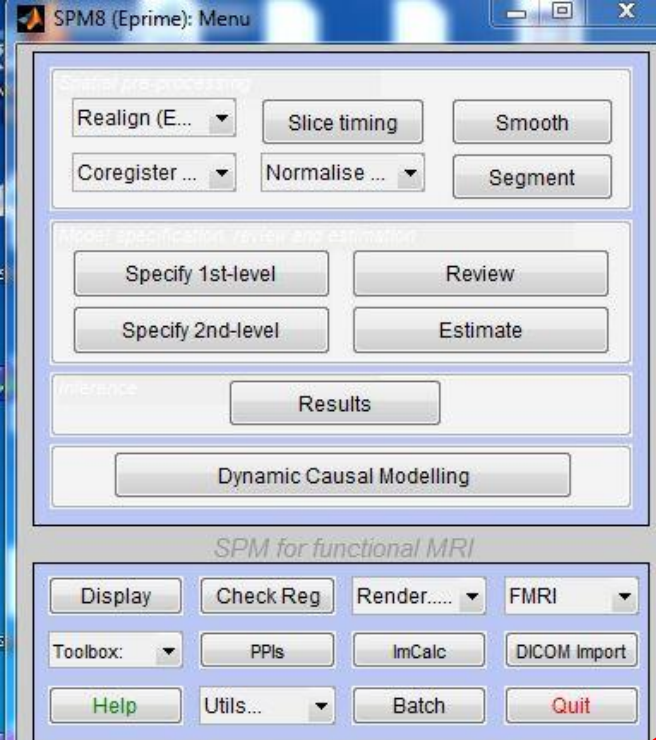

NOTE: I created “test” earlier, don’t click this ever

1: Click the animals_vs_others entry so that it’s highlighted; then press Done

2: Next slide...

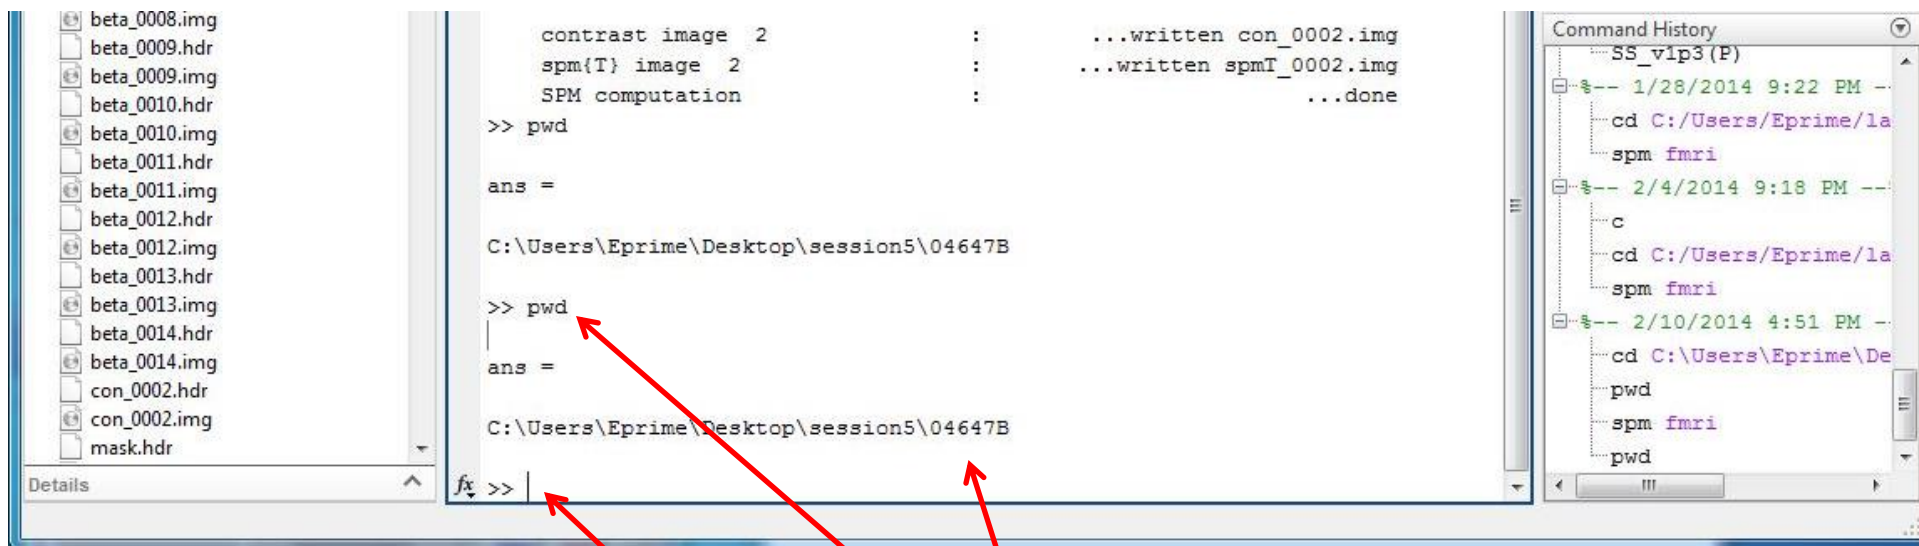

3: Apply masking:
none, then enter

4: Title for comparison: keep at
default "animal_vs_others"

5: Threshold: First choose "none" for " p value adjustment to control", then type: 1
(we will view results in xjview and set the p threshold there)

6: Extent threshold: 0
(we will set it in xjview)

1: After defining the contrast parameters in the previous slide, spm will display a window of results. However, we will ignore this and instead view results using xjview. But don't close spm. Go back to the Matlab command window (it's already open)

The screenshot shows the MATLAB command window with the following content:

```
beta_0008.img
beta_0009.hdr
beta_0009.img
beta_0010.hdr
beta_0010.img
beta_0011.hdr
beta_0011.img
beta_0012.hdr
beta_0012.img
beta_0013.hdr
beta_0013.img
beta_0014.hdr
beta_0014.img
con_0002.hdr
con_0002.img
mask.hdr

contrast image 2 : ...written con_0002.img
spm{T} image 2 : ...written spmT_0002.img
SPM computation : ...done

>> pwd

ans =

C:\Users\Eprime\Desktop\session5\04647B

>> pwd

ans =

C:\Users\Eprime\Desktop\session5\04647B
```

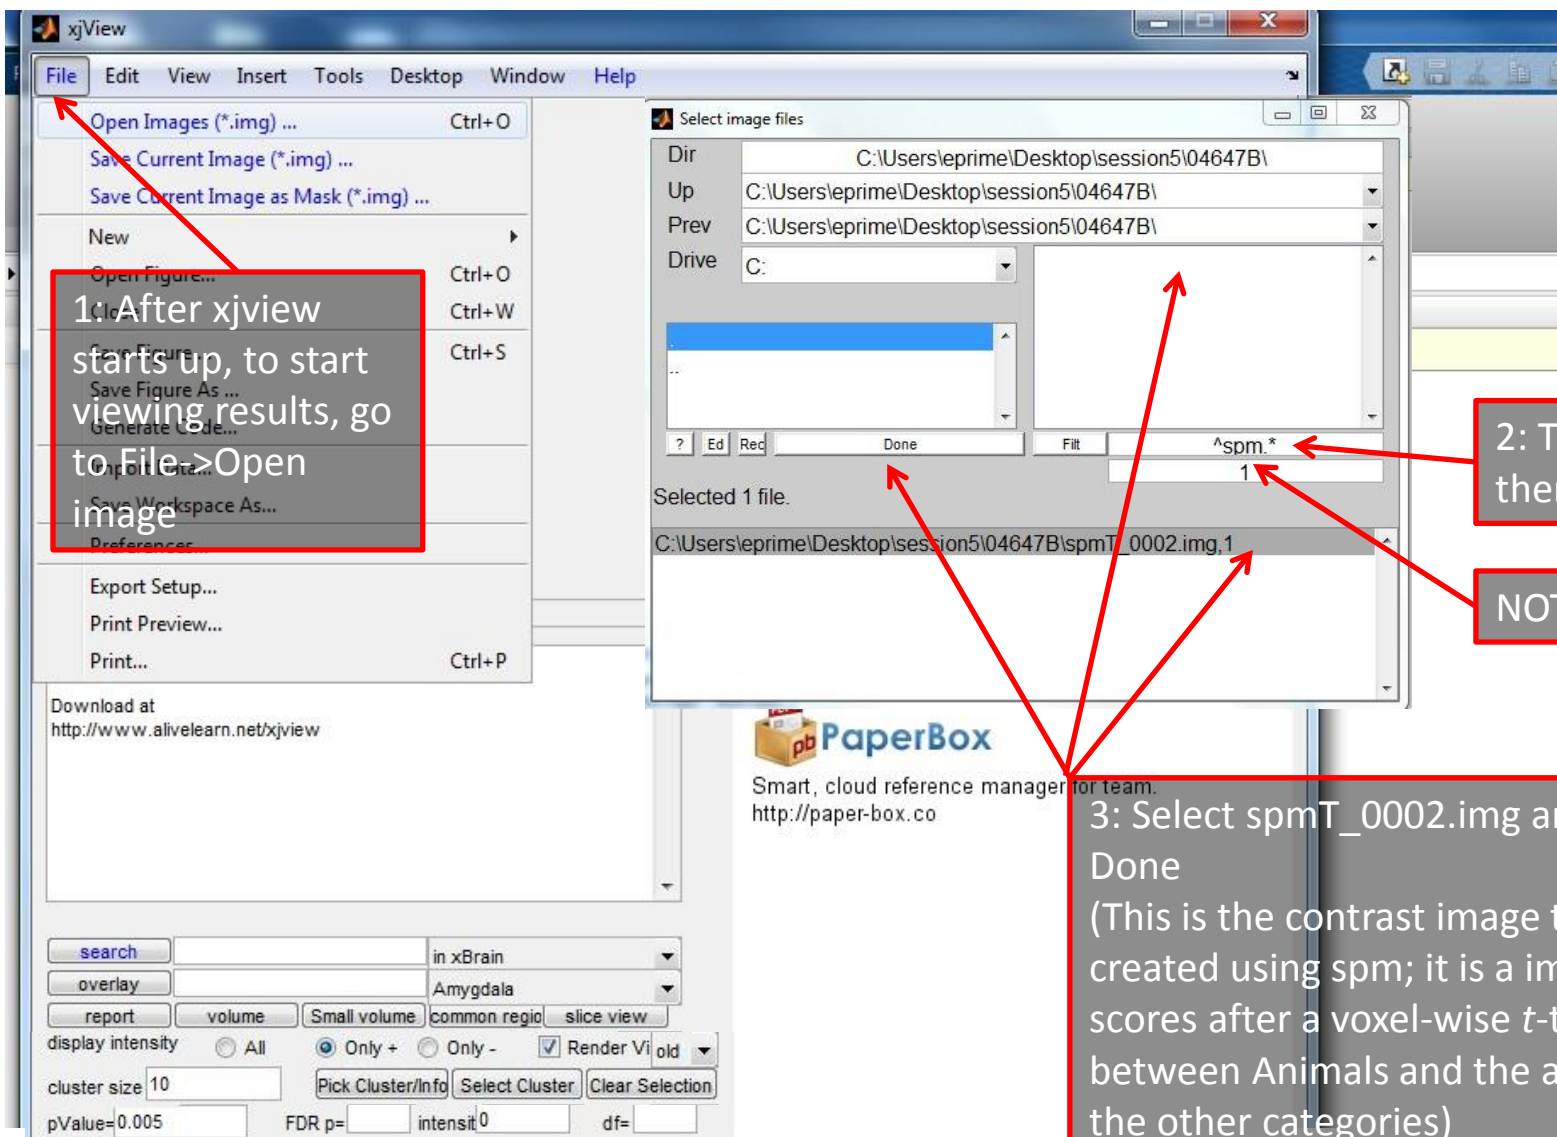

On the right, the Command History window shows the following commands:

```
SS_vlp3(F)
1/28/2014 9:22 PM --
cd C:/Users/Eprime/la
spm_fmri
2/4/2014 9:18 PM --
c
cd C:/Users/Eprime/la
spm_fmri
2/10/2014 4:51 PM --
cd C:\Users\Eprime\De
pwd
spm_fmri
pwd
```

2: To see what directory you're in, type: `pwd`

3: If the directory includes the subject ID, which is 04647B, then start xjview by typing: `xjview`

If you're not in that directory, then `cd` to it

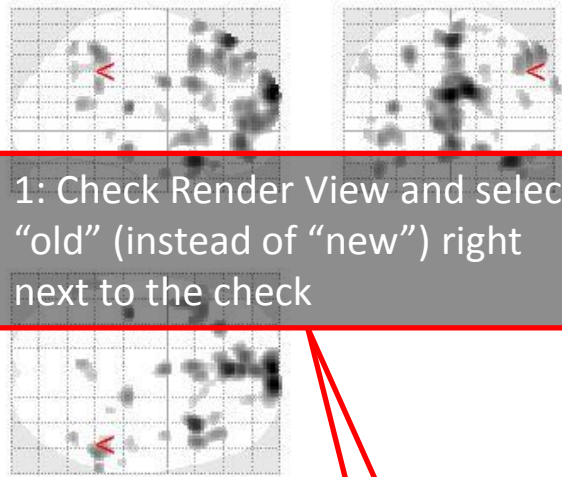

1: After xjview starts up, to start viewing results, go to File > Open image

2: Type ^spm.* then press enter

NOTE: Leave as 1

3: Select spmT_0002.img and press Done
(This is the contrast image that we created using spm; it is a image of t scores after a voxel-wise t -test between Animals and the average of the other categories)

NOTE: For your assignment, you will open different files that you created, which will be named differently

1: Check Render View and select "old" (instead of "new") right next to the check

// Right Cerebrum // Parietal Lobe // Inferior Parietal Lobule // White Matter // undefined // Parietal_Inf_R (aal)

NOTE: The window will not maximize on these computers

NOTE: Wherever you click in the brain (in one of the three slice views), the MNI coordinates will adjust themselves accordingly. You can also manually enter coordinates into these fields and your cursor will go to that point (although the coordinates may change slightly, but that's okay – don't worry about it)

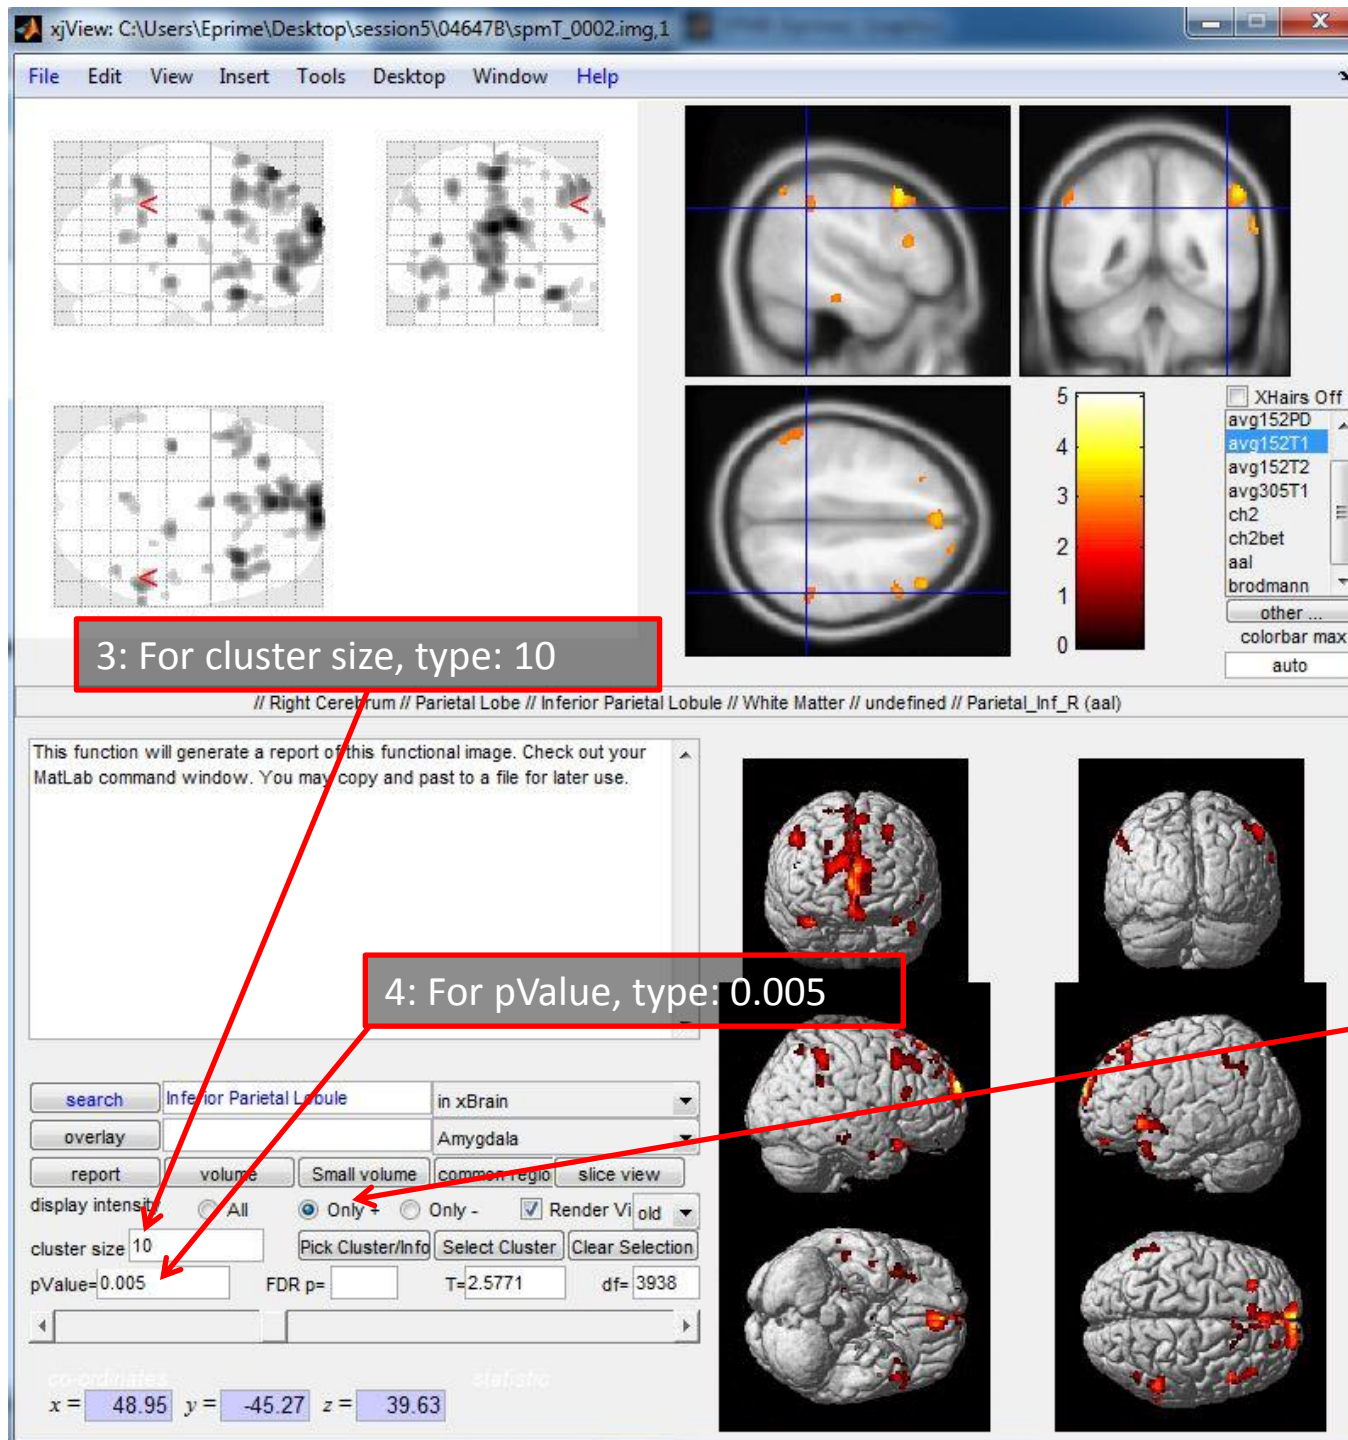

NOTE: The AAL brain region name will appear in this circled area whenever your cursor is within the grey matter of the brain. Sometimes the AAL name won't appear; it means that that point isn't defined there, and your cursor is probably in white matter or on/outside the skull

This function will generate a report of this functional image. Check out your MatLab command window. You may copy and past to a file for later use.

search Inferior Parietal Lobule in xBrain
overlay Amygdala
report volume Small volume common ratio slice view
display intensity ☐ All ☒ Only + ☐ Only - ☒ Render View old
cluster size 10 Pick Cluster/Info Select Cluster Clear Selection
pValue=0.005 FDR p= T=2.5771 df=3938
co-ordinates
x = 48.95 y = -45.27 z = 39.63 statistic

2: Next slide...

5: To go back to the original view showing *all* clusters, just click "Only +" again (this works for some reason)

// Right Cerebrum // Frontal Lobe // Middle Frontal Gyrus // Gray Matter // brodmann area 8 // Frontal_Mid_R (aal)

# voxels	structure
278	--TOTAL # VOXELS--
257	Right Cerebrum
257	Frontal Lobe
240	Frontal_Mid_R (aal)
235	Middle Frontal Gyrus
161	Gray Matter
100	brodmann area 8
57	brodmann area 9
53	White Matter
15	Superior Frontal Gyrus
6	Inferior Frontal Gyrus

search brodmann area 8 in xBrain

overlay Amygdala

report volume small volume common region slice view

display intensity ☐ All ☒ Only + ☐ Only - ☒ Render Volume

cluster size 10

pValue=0.005 FDR p= T=2.5771 df= 3938

Pick Cluster/Info Select Cluster Clear Selection

Coordinates x = 48.00 y = 16.00 z = 46.00 statistic 3.63

1: To show a single cluster and display its anatomical information, first click within a desired cluster on the screen (doesn't have to be the one displayed here)

2: Click Select Cluster. It should say that there is one cluster selected in the white space to the left. (If you must de-select a cluster ever, click Clear Selection to the right)

3: Click Pick Cluster/Info. Now you should see # voxels per brain area in the white space to the left

4: That is all that you'll need to do to display this information. The assignment will ask you identify the AAL region with the most voxels. Here, it's Frontal_Mid_R

- We created the *Animals vs. others* contrast as practice. You will create other contrasts for the assignment. This is all the guidance/information that you should need to do the assignment
- See the slides below for help with orientation terms, planes, and brain anatomy and functions
- You are free to download the xjview manual off Blackboard for further help
- If something goes wrong with spm or xjview, just exit the program and restart it from Matlab as usual. You don't have to exit out of Matlab to restart spm or xjview
- If you must restart Matlab for whatever reason, after you start Matlab up be sure to set both paths again and cd back to the "session5" directory

Orientation terms and planes

We are using the **Automated Anatomical Labeling (AAL)** atlas in this lab (very similar to the atlases of your two quizzes)

Lateral gyri and sulci

Medial gyri (some redundancy w/previous slide)

General functional neuroanatomy
